

Quorum.

An AI Investment Committee, coordinated by Band.

A self-assembling committee of specialist AI agents that debate, gate on compliance, escalate, and audit a BUY decision with a human in the loop.

The investment-committee bottleneck

Every asset manager makes high-stakes calls the same manual way — and must document each one for regulators.

2–4

analyst-days of senior time per committee decision — then a hand-written audit trail on top.

Slow

Days of analyst prep and scheduling per name reviewed.

Inconsistent

Anchoring, politics, and who happens to be in the room.

Hard to audit

The decision trail is written by hand — yet legally required.

Assembles, governs, and audits itself

01

Self-assembling

The roster is not fixed. Risk findings decide who joins — recruited live via Band peer discovery.

02

Governed

An enforceable compliance gate: the PM cannot finalize while risk is unresolved.

03

Adversarial + escalating

Bull and Bear must rebut each other; deadlocks escalate to a Chief Risk Officer.

04

Audited + human-approved

A standing Independent Auditor attests the trail before before a human signs off.

Every handoff is a real agent-to-agent message routed through Band — there is no shared database; the case file travels inside the messages.

■ HOW IT WORKS

Ten agents, five model vendors, one Band room

Dark blue = an enforced gate the meeting cannot pass until it clears.

THE FLEET

Portfolio Manager GPT-5.2 · OpenAI **Research** Qwen2.5-72B · Featherless **Bull** DeepSeek-V4 **Bear** Grok-4 · xAI **Risk** o3 · OpenAI **CRO** ·
Specialists · **Auditor** Gemini-2.5 · Google

Coordinated through Band: mention-routed handoffs · shared context · live peer discovery & recruitment · governance gate · human-in-the-loop.

Same fund, three different committees

Company	Risk that fired	Specialist self-recruited	Escalation	Audit	Decision
NVDA	Export-control exposure	Export Controls Analyst	—	✓ pass	BUY · 8%
EA	Earnings-quality	Forensic Accounting Analyst	CRO tie-break	✓ pass	BUY · 6%
AAPL	Premium valuation	Valuation Specialist	CRO tie-break	✓ pass	HOLD

The committee can say no. AAPL came back HOLD — governance produced a 'no,' not a rubber-stamp. Every run is a real Band export, replayable at quorum-ai.streamlit.app.

What changes for a real investment desk

Less coordination

No meetings to schedule, no analysts to chase — the PM routes the case file through Band automatically.

Better decisions

Forced bull-vs-bear rebuttal, an enforced risk gate, and an independent audit cut anchoring and rubber-stamping.

Faster execution

A committee review that took analyst-days completes in minutes.

Operable as-is

A human still signs off, and the the compliant, retained record is record is produced automatically. automatically.

	Manual committee	Quorum
Prep + debate cycle	2–4 analyst-days per name	minutes
Consistency	anchoring-prone, varies by room	adversarial debate + enforced gate
Audit trail	written by hand	auto-generated + independently attested
Reproduce a decision	difficult	full Band trail, replayable

Illustrative ROI: automating the prep-and-documentation loop saves on the order of single-digit \$thousands per decision in labour alone, before avoided compliance overhead. Basis in docs/business-case.md.

A real, regulation-driven market

\$4.9B

Investment-management software (2025) → \$8.5B
by 2030, ~11–12% CAGR

16,544

SEC-registered investment-adviser firms (2025)

\$176.8T

Assets under management across those firms
firms

Why now: the EU AI Act and SEC Rule 17a-4 make the audited decision trail mandatory — regulation creates the market for market for decision provenance.

Three layers, built to scale

Seat SaaS

Per analyst / PM / month

Lands with the team that runs the committee.

Usage

Per committee / per decision

Scales with value; mirrors the real cost cost architecture — frontier models for for judgment, open models for bulk.

Compliance tier

Premium · retained audit trail

Highest willingness-to-pay and stickiest stickiest — it maps to a regulatory obligation, not a preference.

Illustrative beachhead: ~1% of 16,544 RIA firms × ~\$30k blended ACV ≈ ~\$5M ARR — without displacing the data terminals.

Not a terminal. The decision layer.

Player	What they provide	What they don't
Bloomberg / FactSet	Data, analytics, search	No governed decision or attested audit trail
AlphaSense	AI search over filings & transcripts	Surfaces info; doesn't run a governed committee
TradingAgents (OSS)	Multi-agent bull/bear debate	No compliance gate, no audit, no human governance
Quorum	A self-assembling, governed committee with an attested, replayable decision record	—

USP: the governance + auditability layer on top of the data firms already buy — the layer regulation now requires.

Where Quorum goes next

01

Open the registry

Expand the specialist roster beyond three domains — credit, macro, ESG, sector experts.

02

Live market data

Wire real-time fundamentals and news into the case file via case file via tool calls.

03

Portfolio-level mandates

Multi-fund limits, cross-position concentration, and house house policy.

04

Compliance-grade deploy

SOC 2, SSO, and retention controls for regulated production production use.

Quorum.

Faster, consistent, auditable investment decisions — a self-assembling committee, committee, coordinated by Band.
